Alexander (QA Lead)

About me

I am a detail-oriented and analytical QA Engineer with a strong focus on product quality and user experience. My experience in software testing includes functional, regression, and exploratory testing, as well as creating and executing test cases and documenting results.

Currently, I work as a QA Engineer where I test web applications, verify localization and compatibility across platforms, and collaborate closely with developers to ensure product stability and performance.

I am in my final year of Applied Informatics at Ural Federal University, where I have studied programming, databases, algorithms, system analysis, and information systems design. During my studies, I participated in several project-based practicums, applying testing and requirements analysis skills in real projects.

I'm constantly improving my technical expertise, including API testing (Postman), SQL, and the basics of Python and Java. My next goal is to develop skills in automation testing.

In my free time, I enjoy strategy games and reading fiction
